

Case Study - Blast Architects - Grand Designs

Burnhouse Engineering was approached by Blast architects, to assist in the design and manufacture of a unique staircase. The house was to be featured on the Channel 4's Grand Designs TV Series. (businessmagnet.co.uk) - 02 July 2018

We were faced with a difficult challenge to design and install a stair to a tight budget with a fast approaching deadline for the TV program. Our brief was complicated and costly; however we redesigned the stair, simplified the design, and were, therefore able to use stainless steel to achieve a great finish.

Here at Burnhouse Engineering we love a challenge. Give us a call to design your project.

“ Our brief was complicated and costly ”
